

HOW TO DOWNLOAD A TORRENT

This is merely an educational guide if you were genuinely unsure how to download a torrent. The information should be applicable to you, regardless of time passed.

1. Download and install client

This is something you need to do in order to get the information in a torrent. I PERSONALLY prefer qbittorrent, however, uTorrent is there for those who prefer it. This makes no tangible difference to the overall experience.

2. Open the torrent and choose file location

After you have successfully installed the client on your system, open the torrent. This will take you to a screen that should ask where you want your torrent downloaded. The "Downloads" folder will be the default so if you prefer any other file location, change. This will also be an opportunity to make sure you don't download any unwanted files.

3. Wait

This is the simplest step. Just wait for it to download. How long it takes will depend on the file size and how strong your internet connection is.

4. Seed and enjoy

"Seeding" a torrent is important as it's a means of making downloads easier for those who may come after. However, a benefit is that you can still enjoy what you've downloaded. So enjoy it.
